

DOGE of GERMANY The gentlemen's way.

Imagine a Germany in which every decision – whether in companies or ministries – is made with maximum efficiency, minimal risk, and measurable impact. This is precisely what StratePlan, the superintelligence of mAlnthink GmbH, promises.

What sounds like a visionary future scenario today is already reality. The superintelligence-based decision architecture StratePlan delivers 99.99% accuracy and eliminates the typical weaknesses of human planning: delays, inefficiencies, political gut decisions, or economic miscalculations.

When companies switch to efficiency – and the state benefits

StratePlan enables companies to manage resources, personnel, investments, and innovation with unprecedented strategic excellence. **The result: significantly higher profits while minimizing risk.**

And what follows higher profits?

Higher tax revenues – without tax increases, but through economic growth from efficiency.

From Tax Benefits to Government Impact

This is the real turning point: When ministries and public institutions also work with StratePlan, a second wave of transformation begins. Infrastructure projects are finally planned properly, funding is used accurately, administrative costs are massively reduced – and the impact of every government investment increases.

What used to take ten years can now be achieved in a fraction of the time – and with a manageable outcome.

A new balance: Performance – Impact – Prosperity

- Companies operate more efficiently
- The government acts more strategically
- Society benefits at all levels

The superintelligence StratePlan creates a circular system of value creation:

Higher return = more taxes = higher impact = greater social benefit

And therein lies the true path to **prosperity for all!**

Conclusion: Superintelligence as an economic booster

"StratePlan is not just a technological product – it is a new economic logic. Those who plan more intelligently create real prosperity for all," explains Dr. Igor Kadoshchuk, CTO of mAlnthink GmbH.

Germany is may facing a historic turning point.

With StratePlan, not just a tool is available, but a new principle of governance and economics.

Efficiency becomes a responsibility. Impact becomes a duty. And prosperity becomes a logical consequence.

The future is not automated. It is well thought out.

And StratePlan superintelligence thinks ahead.
